Precautions for safe use

Please read carefully this "Precautions for safe use" before use the camera. Then the camera uses correctly with agreeing with below notes.

In this "Precautions for safe use", notes divides into "Warning" and "Caution" to use the camera safety and prevent to harm and damage.

	Warning	This shows, assumption for possibility of serious accident leading death or serious injury if ignore this note and camera uses incorrectly.
	Caution	This shows, assumption for possibility of bear the damage or physical damage if ignore this note and camera uses incorrectly.

About Graphic symbols

This symbol shows general prohibition.

This symbol shows completion or instruction.

[Environment / condition]

Warning	
	Do not use flammable or explosiveness atmospheres. This will cause of personal injury or fire.
	Do not use for "safety for human body" related usage. This camera is designed for use "do not harm human body immediately" if by any chance the camera has malfunction.
Caution	
	Use and store under specified environmental conditions (Vibration, shock, temperature, humidity) in the specifications for this camera. This will cause of fire or damage the camera.

[Installation and cable wiring]

Warning	
	Do not use with out of power voltage range that is specified in the specifications for this camera. This will cause of fire, electrification or malfunction.
	Do not wrong wiring. This will cause of fire or malfunction.

Caution	
	Do not grounding DC power (+) of all devices that are connect to the camera. The camera housing is connecting to 0 V line of camera inside circuit. There is a risk of short circuit between camera inside ciurcuit and frame ground. This will cause of malfunction.
	It is necessary to wiring with turn off the camera This will cause of electrification or malfunction.
	Do not use Camera Link un-supported cable and board. There is a risk of malfunction if the camera connects with wrong environment and turn on the camera.

Aegis (888)687-6877
ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

[Usage instruction]

 Warning	
 Do not touch the terminal and PCB board While turn on the camera. This will cause of electrification or accident caused by malfunction.	 Do not put combustibles near the camera. This will cause of fire.
 Do not use without usage that is specified in the specifications for this camera. This will cause of personal injury or malfunction.	 Do not push metals including screw driver into radiation holes. This will cause of electrification or malfunction.
 Caution	
 Do not push contamination into opening of the camera. This will cause of electrification or malfunction.	 Do not block the radiation holes. This will cause of fire due to increase the camera inside temperature.

[Maintenance]

 Caution	
 Do not disassemble or repair the camera. This will cause of fire, electrification or malfunction.	 It is turn off the camera when maintaining or inspecting the camera. This will cause of electrification.

[Disposal]

 Caution	
 It is necessary to dispose as industrial waste.	

Aegis Electronic Group, Inc.

aegis-g2@aegiselect.com

1 Product Precautions

Do not give shock to the camera.

Do not haul or damage the camera cable.

Do not wrap the camera with any material while using the camera. This will cause the internal camera temperature to increase.

When the camera moving or using the place that temperature difference is extreme, countermeasure for dew condensation (heat removal / cold removal) is necessary.

While the camera is not using, keep the lens cap on the camera to prevent dust or contamination from getting in the sensor or filter and scratching or damaging it.

Do not keep the camera under the following conditions.

In wet, moist, high humidity or dusty place

Under direct sunlight

In extreme high or low temperature place

Near an object that releases a strong magnetic or electric field

Place with strong vibrations

Apply the power that satisfies the specified in specifications for the camera.

The defective pixels may appear due to the sensor characteristics.

Use below recommend materials (or equivalent materials) to clean the surface of glass.

Air dust: Non Freon air duster (NAKABAYASHI Co., LTD.)

Alcohol: Propan-2-ol (SAN'EI KAKO Co., LTD.)

Non-woven: nikowipe clean room (NKB)

Use a soft cloth to clean the camera.

2 Warranty

■ Warranty period

One year after delivery (However, the camera had malfunction with camera uses correctly)

In below case for a fee even within warranty period.

- The malfunction caused by incorrect usage, incorrect modify or repair.
- The malfunction caused by external shock including the camera dropping after delivery the camera.
- The malfunction caused by fire, earthquake, flood disaster, thunderbolt struck, other natural disaster or wrong voltage.

■ Warranty coverage

Exchange or repair the malfunction camera if the malfunction is occurred by our responsibility.

“Warranty” mean is warranty for the delivered camera itself. Please accept the induction damage by the camera malfunction is not included.

 (888)687-6877

ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

3 Overview

This camera is the 8.9 Mega pixels global shutter CMOS sensor with the Camera Link interface camera.

This camera has the external trigger function to obtain the fast moving target image for the machine vision usage.

4 Features

- High resolution

The camera has Sony Pregius 8.9 Mega pixels global shutter CMOS sensor to achieve the maximum 91.98 fps at 10TAP 8bits output.

- Camera Link standard (PoCL) compliance

The camera is compliance with the Camera Link Deca configuration (10TAP 8bits and 8TAP 10bits), Full configuration (8TAP 8bits), Medium configuration (4TAP 8bits, 4TAP 10bits and 4TAP 12bits) and Base configuration (3TAP 8bits, 2TAP 8bits, 2TAP 10bits and 2TAP 12bits).

The camera power can be supply from the PoCL supported Camera Link frame grabber board.

- Global shutter

The camera has Sony Pregius 8.9 Mega pixels global shutter CMOS sensor to support obtaining fast moving target image.

- Fast exposure time

The minimum 1μseconds fast exposure time is supported for the free-run / continuous mode and edge preset trigger mode.

- Trigger operation

Expose and obtain the image by the external trigger signal through CC1 on Camera Link or 2pin on the power / I/O signal connector.

- ROI (Region Of Interest)

The frame rate can be increase by the ROI (eight regions) function.

- Decimation

The horizontal and vertical thinning image is output. The half resolution (2x2 sub-sampling) without change the view angle, and twice faster frame rate image can be obtained by the decimation function.

- Binning *only available for the monochrome model

The brightness of two vertical pixels are summing into one pixel. (No horizontal brightness summing) The twice brighter, half resolution and twice faster frame rate image can be obtained by the binning function.

- Selectable Camera Link clock speed

The Camera Link clock speed can be selectable from 84.857 MHz, 66 MHz or 39.6 MHz.

(84.857 MHz, 66 MHz or 33 MHz are selectable with extend horizontal cycle)

Please select the optimum Camera Link clock speed if the long length Camera Link cable is required.

- Heat dissipation design

The heat of the electronics components inside of the camera is dissipated to the camera housing with the mechanical design, which is the minimized the thermal resistance between the components and housing.

Please manage the camera housing temperature when the camera using in the environment exceeding the ambient temperature specified in this specifications.

5 Features

5.1 Electronic specifications

Model Number		STC-SPB891PCL	STC-SPC891PCL
Image Sensor		1" 8.9M Progressive Monochrome CMOS (Sony: IMX255)	1" 8.9M Progressive Color CMOS (Sony: IMX255)
Shutter Type		Global shutter	
Effective Picture Resolution	10TAP Output	4,090 (H) x 2,160 (V)	
	8TAP / 4TAP / 2TAP Output	4,096 (H) x 2,160 (V)	
	3TAP Output	4,095 (H) x 2,160 (V)	
Cell Size		3.45 (H) μm x 3.45 (V) μm	
Sync System		External Trigger (hardware / software) / Free-run (continuous)	
Maximum Frame Rate (at full resolution) *1	10TAP Output	91.98 fps	
	8TAP Output	73.66 fps	
	4TAP Output	37.10 fps	
	3TAP Output	20.63 fps	
	2TAP Output	18.55 fps	
ADC Bits		12 bits	
Video Output		8 / 10 / 12 bits	
Camera Link Data Output *2		Deca / Full / Medium / Base Configuration	
Camera Link TAP Configuration		10TAP / 8TAP / 4TAP / 3TAP / 2TAP	
Camera Link Clock Speed *3	3TAP Output	66 / 39.6 MHz	
	2TAP, 4TAP, 8TAP, 10TAP Output	84.857 / 66 / 39.6 MHz	
Noise Level (Gain 0 dB)	8bits Output	8TAP / 4TAP / 3TAP / 2TAP: Less than 3 digits 10TAP: Less than 6 digits	
	10bits Output	Less than 12 digits	
	12bits Output	Less than 48 digits	
Sensitivity *5	10TAP Output	120 Lux	270 Lux
	8TAP / 4TAP / 3TAP / 2TAP Output	530 Lux	1,160 Lux
Exposure Time (All TAP common)		1 μsecond to 16.777 seconds (Default: 1 μsecond)	
Gain	Analog Gain	0 dB to 18 dB (Default: 0 dB)	
	Digital Gain	x1 to x11.59 (Default: x1)	
Black Level *4	8bits Output	0 to 63 digits	
	10bits Output		
	12bits Output		
White Balance Gain		N	
ROI	Size	Horizontal	1
		Vertical	4 to 10
	Position	Horizontal	0 to 4,096 (adjustable)
		Vertical	

Default setting: **Bold**

 **(888)687-6877**
ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

Model Number		STC-SPB891PCL	STC-SPC891PCL
Multi ROI		Vertical eight regions x Horizontal one region	
Gamma		Off (1.0) / Programmable Table (Default: 0.45)	
Binning		Two vertical pixels summing / Off	N/A
Decimation		2 x 2 / Off	
Mirror Image		Horizontal / Vertical / Horizontal and Vertical / Off	
Pixel Defect Correction		Up to 256 points	
Auto Image Control	Auto Exposure	N/A	
	Auto Gain	N/A	
	Auto White Balance	N/A	
Operating Mode		Edge preset trigger / Pulse width trigger / Free-run (continuous)	
Save User Mode		Support	
I/O Ports		4 I/Os	
Power	Input Voltage	+12 Vdc +/- 10 % (PoCL Support)	
	Consumption	Maximum: 3.5 W, Typical: 2.7 W	

Default setting: **Bold**

Precautions

(*1) The selected video output bit does not make any influence for the maximum frame rate.

(*2) Camera Link data output formats (TAP configuration and output bits) are in below table:

	10TAP	8TAP	4TAP	3TAP	2TAP
8bits	Deca configuration	Full configuration	Medium configuration	Base configuration	Base configuration
10bits	N/A	Deca configuration	Medium configuration	N/A	Base configuration
12bits	N/A	N/A	Medium configuration	N/A	Base configuration

(*3) Please select the optimum Camera Link clock speed if the long length Camera Link cable is required. Please refer "The image data transferring speed" for more details.

(*4) The selected TAP configuration does not make any influence for the Camera Link clock speed.

(*5) The sensitivity is measured the illumination of the light source for 100% white under below conditions:

Camera Setting		Environment	
Parameter	Setting	Parameter	Setting
Gain Up	0 dB	Light Source	Light Box (White)
AGC	Off	Color temperature	5,100K
White Balance	Optimum	Lens	
Electrical Shutter	1/30 seconds	F on Lens	F5.6
Black Level	Optimum	Target Luminance	IM-600 (Topcon)
Gamma	Factory Setting		

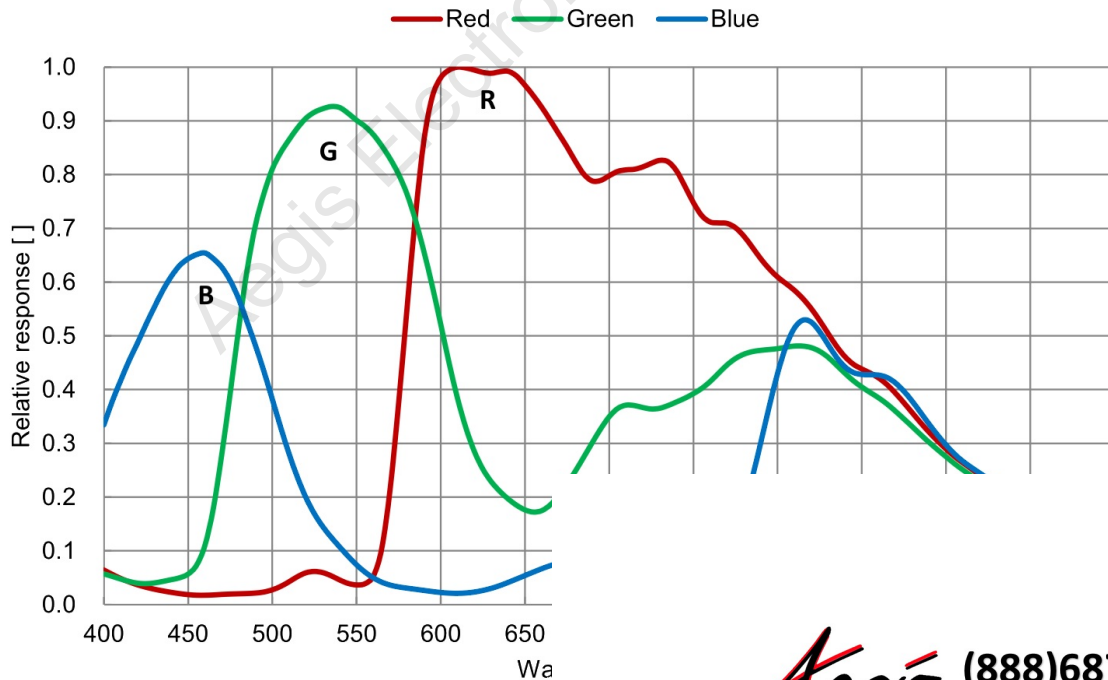

5.2 Spectral Sensitivity Characteristics

5.2.1 STC-SPB891PCL

5.2.2 STC-SPC891PCL

Aegis (888)687-6877
 ELECTRONIC GROUP, INC
 aegis-g2@aegiselect.com

5.3 Mechanical specifications

Model Number	STC-SPB891PCL	STC-SPC891PCL
Dimensions	35 (W) x 35 (H) x 40.7 (D) mm (*1)	
Optical Filter	Non-Optical Filter	
Optical Center Accuracy	Positional accuracy in Horizontal and Vertical directions: +/- 0.3 mm Rotational accuracy of Horizontal and Vertical directions: +/- 1.5 deg.	
Material	Aluminum alloy	
Lens Mount (*2)	C Mount	
Interface Connectors	Camera Link connector: SDR connector (3M) or equivalent x 2 Power / I/O connector: HR10A-7R-6PB (Hirose) or equivalent x 1	
Camera Mounting	1/4" Tripod screw holes (One on top and bottom plates) M4 screws holes (Four on top and bottom, three on each side plates)	
Weight	Approximately 71 g	

(*1) Excluding the connectors

(*2) Recommend lens: More than F2.8 (Close side)

5.4 Environmental specifications

Model Number	STC-SPB891PCL	STC-SPC891PCL
Operational temperature / Humidity	Environmental temperature: 0 to +45 deg. C (camera housing temperature (top plate): less than +64 deg. C (*1)) Environmental humidity: 0 to 85 %RH (No condensation)	
Storage temperature / Humidity	Environmental temperature: -20 to +75 deg. C Environmental humidity: 0 to 85 %RH (No condensation)	
Vibration	20 Hz to 200 Hz to 20 Hz (5 min. / cycle), acceleration 10 G, XYZ 3 directions 30 min. each	
Shock	Acceleration 38 G, half amplitude 6 ms, XYZ 3 directions 3 times each	
Standard compliancy	EMS: EN61000-6-2, EMI: EN55011	
RoHS	RoHS compliance	

(*1) Please insure the camera is installed with the appropriate heat dissipation to keep the camera housing temperature (top plate) is less than 64 deg. C when the camera using the ambient temperature is exceeded 45 deg. C. If the camera has a mounted lens and a tripod with an aluminum plate, this could decrease the camera housing temperature for the heat dissipation.

Temperature measuring point

Aegis (888)687-6877
ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

5.5 Connector specifications

5.5.1 Camera Link connector SDR (3M) or equivalent x 2

This camera is PoCL supported Camera Link camera.

The Camera Link frame grabber board is supplied the power to the camera through the Camera Link cable and connectors if the frame grabber board and the cable are applicable for the PoCL.

Please supply the power (+12 Vdc) from the power / I/O connector if the frame grabber board is not applicable for the PoCL.

Camera Link connector pin assignment

Base Camera Link Connector

Pin No.	Signal Name	Pin No.	Signal Name
1	+12V	14	GND
2	X0-	15	X0+
3	X1-	16	X1+
4	X2-	17	X2+
5	Xclk-	18	Xclk+
6	X3-	19	X3+
7	SerTC+	20	SerTC-
8	SerTFG-	21	SerTFG+
9	CC1- (TRG)	22	CC1+ (TRG)
10	CC2+	23	CC2-
11	CC3-	24	CC3+
12	CC4+	25	CC4-
13	GND	26	+12V

Medium / Full Camera Link Connector

Pin No.	Signal Name	Pin No.	Signal Name
1	+12V	14	GND
2	Y0-	15	Y0+
3	Y1-	16	Y1+
4	Y2-	17	Y2+
5	Yclk-	18	Yclk+
6	Y3-	19	Y3+
7	100Ω	20	100Ω
8	Z0-	21	Z0+
9	Z1-	22	Z1+
10	Z2-	23	Z2+
11	Zclk-	24	Zclk+
12	Z3-	25	Z3+
13	GND	26	+12V

Aegis (888)687-6877
ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

5.5.2 Power / I/O connector

HR10A-7R-6PB (Hirose) or equivalent connector x 1

This connector is for DC12V power input and the input and output signals.
Please use HR10A-7P-6S (Hirose) or equivalent connector for the connecting cable.

Power / I/O connector pin assignment

Pin No.	Signal Name	IN / OUT	Voltage		Consumption
			Low voltage	High voltage	
1	GND	IN	0 V		
2	Trigger	IN	0 to +0.99 V	+2.3 to +3.6V	5 μ A (typ.) (*1)
	FVAL	OUT	0 V	+3.3 V	10 mA (Max.) (*2)
3	LVAL	OUT	0 V	+3.3 V	10 mA (Max.) (*2)
4	Exposure	OUT	0 V	+3.3 V	10 mA (Max.) (*2)
5	Trigger Filter	OUT	0 V	+3.3 V	10 mA (Max.) (*2)
6	12 Vdc	IN	+12 V		

The trigger signal input connector is selectable from below two connectors by the camera control command (12H).

Camera Link connector: CC1

Power / I/O connector: Pin No. 2

When selecting "Pin No.2" for trigger input connector, input and output signals are below:

No.2: Trigger signal input, No.3: LVAL signal out, No.4: Exposure signal out (active low)

When not selecting "Pin No.2" for trigger input connector, input and output signals are below:

No.2: FVAL signal out, No.3: LVAL signal out, No.4: Exposure signal out (active low)

(*1) The power consumption when the high voltage trigger signal input to the input port.

(*2) The power consumption for the output port has to be managed less than 10mA.

ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

9 Scanning Modes

9.1 ROI Output Timing

The vertical size and vertical position for eight ROI regions are adjustable.
The horizontal size and horizontal position for the ROI region is common for all eight regions, are adjustable.
Please refer the ROI setting parameters in below drawing.

*: 8 Regions A, B, C, D, E, F, G and H

The frame rate on ROI

The maximum frame rate can be increase by the vertical effective lines for ROI adjustment.

The frame rate calculation formula is as following:

$$\text{Frame rate} = \text{Horizontal frequency} / (\text{Vertical active lines} + \text{Vertical blanking})$$

The horizontal effective pixels for ROI do not make any influence for the maximum frame rate.

Please refer "The image data transferring speed" for the details of the horizontal frequency.

(888)687-6877
ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

9.2 Decimation

The horizontal and vertical thinning image is output.

By using decimation function, half resolution (2x2 sub-sampling) without change the view angle, and twice faster frame rate image can be obtained.

- * Decimation function cannot use with the binning function.
- * Decimation function cannot use with the ROI function.

9.3 Binning

The brightness of two vertical pixels are summing into one pixel. (No horizontal brightness summing)

By using binning function, twice brighter, half resolution and twice faster frame rate image can be obtained.

- * Binning function cannot use with the decimation function.
- * Binning function can use with the ROI function.

(888)687-6877
ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

10 Image Data Transferring Speed

10.1 Extend horizontal cycle

The horizontal cycle of the image can extend with the camera control command.
 The frame rate is changed when the horizontal cycle of the image is extended.
 The Camera Link clock speed is selectable from 84.574 MHz, 66 MHz and 33MHz.

Please select the optimum Camera Link clock speed if the long length Camera Link cable is required.

The calculate formula for extend time:
 Extend time = EXT_HB [11:0] * 13.468 nsec.
 * EXT_B: Data of 77H and 76H

The table of the Camera Link clock speed and the camera operation

Camera settings		Camera operation		
Register [EEH]	EXT_HB[11:0] Register [77H,76H]	Camera Link Clock speed (MHz)	Horizontal frequency (KHz)	Frame rate (fps)
Camera Link TAP Configuration	Extend horizontal cycle (steps) *1 step: 13.468 nsec.			
10	0	84.857	205.11	91.98
	104	66	159.33	71.45
	570	33	79.67	35.73
8	0	84.857	164.27	73.66
	129	66	127.80	57.31
	710	33	63.90	28.65

10.2 Change transferring clock

The Camera Link clock speed is selectable from 84.857 MHz, 66 MHz or 39.6 MHz.

(This function is available if serial number of camera is 18Exxxx or later. Please use extending horizontal cycle to reduce transferring clock)

Please select the optimum Camera Link clock speed if the long length Camera Link cable is required.

The table of the Camera Link clock speed and the camera operation

Camera settings		Camera operation		
Register [EEH]	Register [11H[D6~D5]]	Camera Link Clock speed (MHz)	Horizontal frequency (KHz)	Frame rate (fps)
10	00	84.857	205.11	91.98
	01	66	159.33	71.45
8	10 / 11	39.6	79.67	35.73
	00	84.857	164.27	73.66
	01	66	127.80	57.31
	10 / 11	39.6	63.90	28.65
4	00	84.857	82.32	37.10
	01	66	64.06	28.86
	10 / 11	39.6	32.06	14.43
3	00 / 01	66	46.00	20.63

11 Camera Function Modes

11.1 Free-run / Continuous mode

This mode can be outputted camera video signal continuously.

11.1.1 Full frame exposure

11.1.2 Electronic shutter

Aegis (888)687-6877
 ELECTRONIC GROUP, INC
 aegis-g2@aegiselect.com

11.2 Pulse width trigger mode

The camera exposure starts by the trigger signal.
 In this trigger mode with positive trigger polarity, the camera exposure starts at the rising edge of the trigger signal and stops at the falling edge of the trigger signal.
 Therefore, In the case of the exposure positive polarity is selected, the exposure periods (exposure time) are the high states of the trigger signal.

Note. 1: The exposure time sets by the active pulse width of the trigger signal.
 No FVAL output without any trigger signal.

11.3 Edge Preset Trigger mode

The camera exposure starts by the trigger signal.
 In this trigger mode with positive trigger polarity, the camera exposure starts at the rising edge of the trigger signal.
 The exposure time is preset by the "Electrical Shutter" settings.

Note. 1: The exposure time sets by the preset ele

 ELECTRONIC GROUP, INC
 aegis-g2@aegiselect.com

11.4 Exposure Timing Details

11.4.1 Fast trigger mode

The camera exposure starts immediately after the valid edge of the trigger signal is detected.

Exposure time: Pulse width trigger: $T1' = \text{Active pulse width of the trigger signal} + \text{Toffset}$
(Toffset = 13.73us.)

Edge preset trigger: $T1' = \text{Preset exposure time}$

(*1) The active pulse width for the trigger signal has to be longer than 0.8 μ seconds.
If this is shorter than 0.8 μ seconds, the trigger signal is invalid.

(*2) The overlap is the trigger signal input to the camera while the image is transferring.

11.4.2 Trigger overlap mode

The fast trigger mode is recommended to use.

Please use this overlap mode, if the one horizontal line has different level of the signal (similar of the horizontal line noise), is appeared in the image when the trigger signal inputs while the image data is transferring.

Exposure time: Pulse width trigger: $T1' = \text{Active pulse width of the trigger signal} + \text{Toffset}$
(Toffset = 13.73us.)

Edge preset trigger: $T1' = \text{Preset exposure time}$

* The actual exposure time u

(*1) The active pulse width for the trigger sig
If this is shorter than 0.8 μ seconds, the tr

11.4.3 Exposure timing for each mode

Toffset = 13.73 microseconds

Exposure start mode	Trigger mode	(Tf)	Delay for the trigger signal input to start exposure (Tdly)		Adjustment unit for the exposure time	Exposure time (T1)	Minimum Exposure time (T1min)
			Without trigger overlap	With trigger overlap			
Fast trigger	Pulse width	0.8 μs.	No delay	No delay to 1H	40.4ns (24.75MHz)	Twidth + Toffset	Toffset
	Edge preset				1us	Preset exposure time	1us
Trigger Overlap	Pulse width	0.8 μs.	2 to 3H	2 to 3H	1H	Twidth + Toffset	1H + Toffset
	Edge preset					Preset exposure time

12 Camera Function

12.1 Lookup table (Gamma)

The camera has the brightness signal conversion function based on the input brightness level with the lookup table. This table has 32 steps (input signal (0 to 4,095) divided by 32). The output signal is converted for these 32 steps. The midpoint x that is between the 32 steps, is calculated automatically. Please refer B0H to CEH [The lookup table (Gamma)] in the camera control command for more details. Gamma Level can be set as 15 steps.

The output signal formula is as following:

$$\text{Output signal} = \text{Table value} * (\text{Gamma Level (0 to 15) [Address: 4FH]} / 15)$$

e.g.: X_2 , X_3 are selected as the inputs from 32 steps. The output y will come from the converted point l and X_3 .

13 Communication Protocol specifications

This camera has a communication function that enables external devices such as a PC, to change the camera settings. Please use "CLCtrl2 (ver. 1.18 or later)" communication software or use the following communication protocol to communicate to the camera.

13.1 Communication method

UART (RS232C standard compliant), Binary communication

13.2 Communication settings

Baud rate	9,600bps / 38,400bps / 57,600bps / 115,200bps
Data bit	8bits
Parity	None
Stop bit	1bit
Flow control	None

Aegis Electronic Group, Inc.

 **(888)687-6877**
 ELECTRONIC GROUP, INC
aegis-g2@aegiselect.com

13.3 Communication format

A. The sending data format from the PC to the camera is as follows:

SOF (8bits)	Device code (6bits)	Read / write (1bit)	Page selection (1bit)	Command code (8bits)	Data length (8bits)	Data (Write: Data length) (Read: 1byte)	EOF (8bits)
----------------	------------------------	------------------------	--------------------------	-------------------------	------------------------	--	----------------

B. The receiving data format from the camera is as follows:

a. After sent the read command

SOF (8bits)	Data length (8bits)	Data (Data length byte)	EOF (8bits)
----------------	------------------------	----------------------------	----------------

b. After sent the write command

SOF (8bits)	Data length (00H) (8bits)	Receiving code (8bits)	EOF (8bits)
----------------	------------------------------	---------------------------	----------------

C. Descriptions of the format

SOF	Start of the frame. Sets (or obtains) the value is as "02H" always.
Device code	Sets the device code of the camera. Sets the value is as "000000" always.
Read / Write	Sets "0" when sending read command. Sets "1" when sending write command.
Page selection	Sets "0" when accessing to the register of the camera. Obtains the current data from the register when sending read command. Replaces the data in the register by sending data when sending write command. The data in the EEPROM does not replace. Sets "1" when accessing to the EEPROM of the camera. Obtains the data from the EEPROM when sending read command. Replaces the data in the EEPROM by sending data when sending write command. The camera uses the data in the EEPROM when the power on the camera. The camera sends the receiving code as "01H" to the PC after the data in the EEPROM is replaced. The camera rejects any commands while the data in the EEPROM is replacing. (Approximately 5 mseconds / byte)
Command code	Sets the command code. Please refer "The camera control commands" for more details.
Data length	Sets (or obtains) the data length. (unit: byte) For receiving data: The data length is based on the command after sent read command. The data length is "00H" after sent write command. For sending data: The data length is 1 byte when sending read command. The data length is based on the command when sending write command.
Data	Sets (or obtains) the data based on the command.
EOF	End of the frame Sets (or obtains) the value is as "03H" always.
Receiving code	Obtains the result of the sending command. 01H: The command proceeded correctly (ACK) 10H: The command could not process correctly (NAC) 11H: The communication issue

D. Command example

Send the read command to read the 00H address:

02, 00, 00, 01, 00, 03
SOF, (Device code / Read / Register), Comr

The return command

02, 01, 00, 03

13.4 Camera control commands

13.4.1 Camera control commands list

Note. 1: The data unit of each command is 1 byte (8bits).

Note. 2: The data can be saved to the EEPROM if "X" in the "EEPROM" column in the list.

Note. 3: The camera is operating with the data of the EEPROM when the power on the camera.

Command No.	Command Description																																
20H: SVR [7:0] 21H: SVR [15:8] 22H: SVR [23:16]	[Exposure time of the electronic shutter] Default data: SVR [23..0] = 0, Data range: 0 to 16,777,215 Sets the preset shutter speed (exposure time) for electronic shutter. Exposure time (shutter speed) = 1 * SVR (μseconds)																																
28H: DLY [7:0]	[Delay time for the trigger signal] Default data: DLY [7..0] = 0, data range: 0 to 255 Sets the delay time from the trigger signal input to start exposure. Delay time = 2 * DLY [7..0] (μseconds)																																
30H: A_GAIN [7:0] 31H: D_GAIN [7:0]	[Analog gain / Digital gain] Default data: A_GAIN [7:0] = 0, D_GAIN [7:0] = The factory adjusted value, Data range: GAIN_A: 0 to 180, D_GAIN: 0 to 240 Sets the analog gain and digital gain. TOTAL_GAIN = (A_GAIN + D_GAIN + OFFSET_GAIN) / 10 [dB]																																
38H: CLAMP [7:0]	[Clamp level] Default data: CLAMP [7..0] = 40, Data range: 0 to 255 Sets the 10bits clamp level of the black signal.																																
3AH: WBR [7:0]	[White Balance R gain] Default data: WBR [14..0] = 4,096, Data range (WBR [7..0]): 0 to 255 Sets the Red gain on Bayer Video level = (Input video level - CLAMP [7..0]) * WBR [14..0] / 4,096 + CLAMP [7..0] WBR [14..0] = 4,096: x1 gain, WBR [14..0] = 8,192: x2 gain, WBR [14..0] = 12,288: x3 gain, WBR [14..0] = 16,384: x4 gain, WBR [14..0] = 20,480: x5 gain, WBR [14..0] = 24,576: x6 gain, WBR [14..0] = 28,672: x7 gain, WBR [14..0] = 32,768: x8 gain *WBR [14..8]: EAH																																
3BH: WBB [7:0]	[White Balance B gain] Default data: WBB [14..0] = 4,096, Data range (WBB [7..0]): 0 to 255 Sets the Blue gain on Bayer Video level = (Input video level - CLAMP [7..0]) * WBB [14..0] / 4,096 + CLAMP [7..0] WBB [14..0] = 4,096: x1 gain, WBB [14..0] = 8,192: x2 gain, WBB [14..0] = 12,288: x3 gain, WBB [14..0] = 16,384: x4 gain, WBB [14..0] = 20,480: x5 gain, WBB [14..0] = 24,576: x6 gain, WBB [14..0] = 28,672: x7 gain, WBB [14..0] = 32,768: x8 gain *WBB [14..8]: EBH																																
3CH: WBGR [7:0]	[White Balance GR gain] Default data: WBGR [14..0] = 4,096, Data range (WBGR [7..0]): 0 to 255 Sets the Green gain on Bayer GR line Video level = (Input video level - CLAMP [7..0]) * WBGR [14..0] / 4,096 + CLAMP [7..0] WBGR [14..0] = 4,096: x1 gain, WBGR [14..0] = 8,192: x2 gain, WBGR [14..0] = 12,288: x3 gain, WBGR [14..0] = 16,384: x4 gain, WBGR [14..0] = 20,480: x5 gain, WBGR [14..0] = 24,576: x6 gain, WBGR [14..0] = 28,672: x7 gain, WBGR [14..0] = 32,768: x8 gain *WBGR [14..8]: ECH																																
3DH: WBGB [7:0]	[White Balance GB gain] Default data: WBGB [14..0] = 4,096, Data range (WBGB [7..0]): 0 to 255 Set the Green gain on Bayer GB line Video level = (Input video level - CLAMP [7..0]) * WBGB [15..0] / 4,096 + CLAMP [7..0] WBGB [14..0] = 4,096: x1 gain, WBGB [14..0] = 8,192: x2 gain, WBGB [14..0] = 12,288: x3 gain, WBGB [14..0] = 16,384: x4 gain, WBGB [14..0] = 20,480: x5 gain, WBGB [14..0] = 24,576: x6 gain, WBGB [14..0] = 28,672: x7 gain, WBGB [14..0] = 32,768: x8 gain *WBGB [14..8]: EDH																																
4FH: GAMMA_LEVEL [3:0]	[Gamma Level Setting] Default data: GAMMA_LEVEL [3..0] = 15, Data range: 0 to 15 Sets the Gamma level setting for the gamma table function. <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 12.5%;">D7</td> <td style="width: 12.5%;">D6</td> <td style="width: 12.5%;">D5</td> <td style="width: 12.5%;">D4</td> <td style="width: 12.5%;">D3</td> <td style="width: 12.5%;">D2</td> <td style="width: 12.5%;">D1</td> <td style="width: 12.5%;">D0</td> </tr> <tr> <td colspan="2">D7</td> <td colspan="3">Lookup table gamma correction</td> <td colspan="2">0: With Gamma correction between two points</td> <td>1: Without Gamma correction between two points</td> </tr> <tr> <td colspan="2">D6 to D4</td> <td colspan="3">No Function</td> <td colspan="3">Always set as "000"</td> </tr> <tr> <td colspan="2">D3 to D0</td> <td colspan="3">Gamma level</td> <td colspan="3"></td> </tr> </table> <p>Please refer "Lookup table (Gamma)" for</p>	D7	D6	D5	D4	D3	D2	D1	D0	D7		Lookup table gamma correction			0: With Gamma correction between two points		1: Without Gamma correction between two points	D6 to D4		No Function			Always set as "000"			D3 to D0		Gamma level

13.4.3 Description of the camera control commands (Bank No.: 01H)

The underline settings are the factory default settings.

Command No.	Command Description
50H: GSTEP0 [7..0]	[Lookup table (Gamma)] Default data: GSTEP0 [7..0] = 36H (Gamma = 0.45)
51H: GSTEP1 [7..0]	[Lookup table (Gamma)] Default data: GSTEP1 [7..0] = 4AH (Gamma = 0.45)
52H: GSTEP2 [7..0]	[Lookup table (Gamma)] Default data: GSTEP2 [7..0] = 58H (Gamma = 0.45)
53H: GSTEP3 [7..0]	[Lookup table (Gamma)] Default data: GSTEP3 [7..0] = 64H (Gamma = 0.45)
54H: GSTEP4 [7..0]	[Lookup table (Gamma)] Default data: GSTEP4 [7..0] = 6FH (Gamma = 0.45)
55H: GSTEP5 [7..0]	[Lookup table (Gamma)] Default data: GSTEP5 [7..0] = 79H (Gamma = 0.45)
56H: GSTEP6 [7..0]	[Lookup table (Gamma)] Default data: GSTEP6 [7..0] = 81H (Gamma = 0.45)
57H: GSTEP7 [7..0]	[Lookup table (Gamma)] Default data: GSTEP7 [7..0] = 89H (Gamma = 0.45)
58H: GSTEP8 [7..0]	[Lookup table (Gamma)] Default data: GSTEP8 [7..0] = 91H (Gamma = 0.45)
59H: GSTEP9 [7..0]	[Lookup table (Gamma)] Default data: GSTEP9 [7..0] = 98H (Gamma = 0.45)
5AH: GSTEP10 [7..0]	[Lookup table (Gamma)] Default data: GSTEP10 [7..0] = 9EH (Gamma = 0.45)
5BH: GSTEP11 [7..0]	[Lookup table (Gamma)] Default data: GSTEP11 [7..0] = A5H (Gamma = 0.45)
5CH: GSTEP12 [7..0]	[Lookup table (Gamma)] Default data: GSTEP12 [7..0] = ABH (Gamma = 0.45)
5DH: GSTEP13 [7..0]	[Lookup table (Gamma)] Default data: GSTEP13 [7..0] = B0H (Gamma = 0.45)
5EH: GSTEP14 [7..0]	[Lookup table (Gamma)] Default data: GSTEP14 [7..0] = B6H (Gamma = 0.45)
5FH: GSTEP15 [7..0]	[Lookup table (Gamma)] Default data: GSTEP15 [7..0] = BBH (Gamma = 0.45)
60H: GSTEP16 [7..0]	[Lookup table (Gamma)] Default data: GSTEP16 [7..0] = C1H (Gamma = 0.45)
61H: GSTEP17 [7..0]	[Lookup table (Gamma)] Default data: GSTEP17 [7..0] = C6H (Gamma = 0.45)
62H: GSTEP18 [7..0]	[Lookup table (Gamma)] Default data: GSTEP18 [7..0] = CAH (Gamma = 0.45)
63H: GSTEP19 [7..0]	[Lookup table (Gamma)] Default data: GSTEP19 [7..0] = CFH (Gamma = 0.45)
64H: GSTEP20 [7..0]	[Lookup table (Gamma)] Default data: GSTEP20 [7..0] = D4H (Gamma = 0.45)
65H: GSTEP21 [7..0]	[Lookup table (Gamma)] Default data: GSTEP21 [7..0] = D8H (Gamma = 0.45)
66H: GSTEP22 [7..0]	[Lookup table (Gamma)] Default data: GSTEP22 [7..0] = DDH (Gamma = 0.45)
67H: GSTEP23 [7..0]	[Lookup table (Gamma)] Default data: GSTEP23 [7..0] = E1H (Gamma = 0.45)
68H: GSTEP24 [7..0]	[Lookup table (Gamma)] Default data: GSTEP24 [7..0] = E5H (Gamma = 0.45)
69H: GSTEP25 [7..0]	[Lookup table (Gamma)] Default data: GSTEP25 [7..0] = E9H (Gamma = 0.45)
6AH: GSTEP26 [7..0]	[Lookup table (Gamma)] Default data: GSTEP26 [7..0] = EDH (Gamma = 0.45)
6BH: GSTEP27 [7..0]	[Lookup table (Gamma)] Default data: G
6CH: GSTEP28 [7..0]	[Lookup table (Gamma)] Default data: G
6DH: GSTEP29 [7..0]	[Lookup table (Gamma)] Default data: G
6EH: GSTEP30 [7..0]	[Lookup table (Gamma)] Default data: G
6FH: GSTEP31 [7..0]	[Lookup table (Gamma)] Default data: G

13.4.4 The command sequence for the data saves to the EEPROM

Please follow the command sequence in below for the data saves to the EEPROM.

- 1) Sets "1" to command 80H.0 to accept "write control to the EEPROM".
- 2) Sends the EEPROM write command with data, which sets "1" for the page selection.
- 3) The camera sends back one of the below receiving code after the EEPROM write command is proceeding.
01H: Data saves to the EEPROM correctly
10H: EEPROM write error
- 4) Command 80H.0 is changed to "0" automatically after the EEPROM write command is proceeding.

Note.1) The data does not save into the EEPROM when the command 80H.0 is "0".

Note.2) The data of the multiple continuous commands can save to the EEPROM by one sets of above sequence (1) to 4)).
e.g. Multiple continuous command: "10H, 11H, 12H and 13H" or "22H, 23H and 24H".

Note.3) When save the data of the multiple commands, which is not continuous commands, to the EEPROM, it is necessary to operate the multiple sets of above sequence (1) to 4)).
e.g. Multiple commands: "10H, 13H, 19H and 1BH" or "20H, 23H and 25H".
