1. Scope of Application

This is to describe VCC-FC20V49CL, high-speed Color CMOS Camera. All specifications contained herein are subject to change without prior notice. Reproduction in whole or in part is prohibited.

2. Handling Precautions

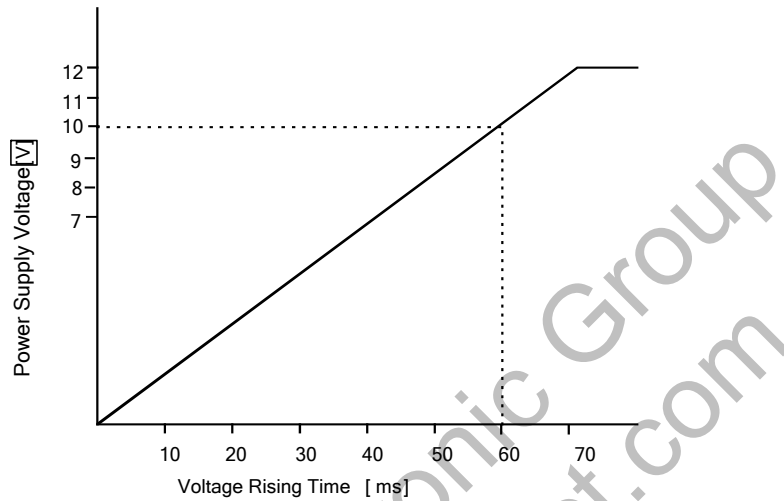

The camera must not be used for any nuclear equipments or aerospace equipments with which mechanical failure or malfunction could result in serious bodily injury or loss of human life. Our warranty does not apply to damages or defects caused by irregular and/or abnormal use of the product.

Please observe all warnings and cautions stated below.

Our warranty does not apply to damages or malfunctions caused by neglecting these precautions.

- Do not use or store the camera in the following extreme conditions:
 - Extremely dusty or humid places.
 - Extremely hot or cold places (operating temperature -5°C to $+45^{\circ}\text{C}$)
 - Close to generators of powerful electromagnetic radiation such as radio or TV transmitters.
 - Places subject to fluorescent light reflections.
 - Places subject to unstable (flickering, etc.) lighting conditions.
 - Places subject to strong vibration.
- Remove dust or dirt on the surface of the lens with a blower.
- Do not apply excessive force or static electricity that could damage the camera.
- Do not shoot direct images that are extremely bright (e.g., light source, sun, etc.), and when camera is not in use, put the lens cap on.
- Follow the instructions typeapter 7, "External connector pin assignment" for connecting the camera. Improper connection may cause damages not only to the camera but also to the connected devices.
- Confirm the mutual ground potential carefully and then connect the camera to monitors or computers. AC leaks from the connected devices may cause damages or destroy the camera.
- Do not apply excessive voltage. (Use only the specified voltage.) Unstable or improper power supply voltage may cause damages or malfunction of the camera.

- The voltage ripple of camera power DC +12V \pm 10% shall be within \pm 50mV. Improper power supply voltage may cause noises on the video signals.
- The rising time of camera power supply voltage shall be less than +10V, Max 60ms. Please avoid noises like chattering when rising.

In case of abnormal operation, contact the distributor from whom you purchased the product.

3. Notes on Partial Scan Mode Operation

At vertical partial scan mode, the smaller the set reading out lines, the faster the camera exposure and output operation will be. And, at the same time, power consumption will be increased. Power consumption when the minimum partial scan line number is set will be approx. 2.4W, while it will be approx. 1.6W at full frame scan. That is about 1.5 times higher. With higher power consumption, heat will be increased as well.

We recommend promoting heat dissipation when installing our camera to your system, especially when reading out line is set between the ranges of 50lines to 1line.

For instance, installing the camera to the place under 40 degrees C ambient temperature, or installing the camera to a metallic part, would be effective.

4. Product Outline

VCC-FC20V49CL is an industrial Color high-speed digital video camera module utilizing a global shutter type, CMOS sensor. Interface of FC20V49CL complies with camera link (Base Configuration) with its resolution 300K pixels. Clipping part of the image for VGA 1/4 type size, entire pixels can be read out within approx. 1/500s.

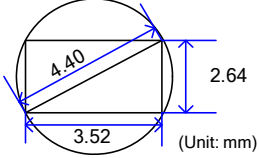

Key Features

- High frame rate, 502.29 fps, at full frame scan mode with Camera Link Base Configuration.

$$\begin{aligned} \text{Frame rate} &= (\text{pixel clock}) / (((\text{horizontal output pixels}/\text{output tap number}) \\ &+ \text{Horizontal Blanking}) \times (\text{Vertical Output Lines} + \text{Vertical Blanking})) \\ &= (79.99\text{MHz}) / (((640/2) + 5) \times (480 + 10)) \\ &= 502.29\text{fps} \end{aligned}$$
- 29mm cubic in size (excluding projection).
- Camera Link 2Tap output (Base Configuration)
- RAW data output 8bit / 10bit selectable
- External Trigger
- Shutter Speed: 1/500s ~ 1/50,000s
- Fixed Trigger Shutter Mode
- Pulse Width Trigger Shutter Mode
- Partial Scan Mode (Vertical)
- Free sample control software for evaluation purpose only is downloadable via our web.

5. Specification

5.1. General Specification

| Item | Specification | |
|--------------------------------------|---|---|
| (1) Pickup Device | Device Type | Color CMOS |
| | Effective Pixel Number | 640(H) × 480(V) |
| | Unit Cell Size | 5.50 μm(H) × 5.50 μm(V) |
| | Chip Size | 3.52mm(H) × 2.64mm(V) (640×5.5 μm(H) × 480×5.5 μm(V)) |
| | Image Circle | φ 4.4mm  |
| (2) Video output frequency | Pixel Clock | 79.99 MHz |
| | Horizontal Frequency | 246.12kHz Pixel Clock: 325CLK |
| | Vertical Frequency | Full Frame Scan Mode: 502.29Hz Scanning Lines: 490H |
| | | Partial Scan Mode 984.49Hz Scanning Lines: 250H (Vertical 1/2): |
| (3) Sync. system | Internal Sync. System | |
| (4) Video output standard | Camera Link 2Tap Output (Base Configuration) | |
| (5) Resolution | 480 TV lines equivalent (VGA size) | |
| (6) Output Format | RAW data output 8bit/10bit selectable | |
| (7) Sensitivity | F2.0 2000lx (Shutter Speed: 1/500s, Gain 0dB) | |
| (8) Minimum illumination | F1.4 150lx (Shutter Speed: 1/500s, Gain +12dB) | |
| (9) Dust or stains in optical system | No dust or stain shall be detected on the testing screen with setting the camera aperture at F16. | |
| (10) Power requirements | DC+12V±10% (Max voltage shall not be exceeded +15V.) | |
| (11) Power consumption | Approx. 1.6W at full frame scan (DC+12V IN). Approx. 2.4W at partial scan with minimum line number setting (DC DC+12V IN). | |
| (12) Dimension | Refer to overall dimension drawing (Clause 12) H:29mm W:29mm D:29mm (excluding projection) | |
| (13) Mass | Approx. 50g | |
| (14) Lens mount | C mount (Refer to overall dimension drawing) | |
| (15) Optical axis accuracy | Refer to drawing for CMOS Optical Axis Accuracy (Clause 11) | |
| (16) Gain variable range | 0~+12dB (Digital Gain: +0.1dB/step) | |
| (17) White balance adjustment range | 2800K~9000K(Manual White Balance)(Guaranteed range) | |
| (18) Gamma | 1(Fixed) | |
| (19) Shutter speed variable range | OFF(1/500),1/750s,1/1000s,1/1500s,1/2000s,1/2500s,1/4000s,1/5000s,1/10000s,1/15000s, | |
| | 1/20000s,1/25000s,1/30000s,1/40000s,1/50000s | |
| (20) Trigger shutter mode | •Fixed Trigger Shutter Mode | |
| | •Pulse Width Trigger Shutter Mode (Exposure time is set with the pulse width of trigger signal.) | |

| Item | Specification | |
|-------------------------------|--|---|
| (21) Safety/Quality standards | UL: | Conform to UL Standard including materials and others. |
| | CE: | Conform to EN55022: 2006 (Class B) for Emmission Conform to EN61000-6-2: 2005 for Immunity |
| | RoHS: | Conform to RoHS |
| | FCC: | To be applied for FCC Class A Digital Device This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. |
| (22) Durability | Vibration | Acceleration : 98m/s ² (10G) |
| | | Frequency : 20~200 Hz |
| | | Direction : X,Y,Z 3 directions |
| | | Testing time : 120 min for each direction |
| Shock | No malfunction shall be occurred with 980m/s ² (100G) for ±X, ±Y, and ±Z, 6 directions. (without package) | |
| (23) Operation environment | Temperature | Operation guaranteed: -5°C~+45°C Performance guaranteed: 0°C~+40°C |
| | Humidity | RH 20~80% with no condensation |
| (24) Storage environment | Temperature | -25°C ~ +60°C |
| | Humidity | RH 20~80% with no condensation |

5.2. Camera Output Signal Specification

| Item | | Specification | |
|--------------------------|----------------------------------|---------------------------|--|
| (1) Video output data | Video Output | 640 (H) × 480(V) | At Full Frame Scan Mode |
| (2) Sync. Signal I/O | LVAL output | LVDS | Camera Link connector |
| | FVAL output | LVDS | |
| | DVAL output | LVDS | |
| | SP(Exposure) | LVDS | |
| | HD output | LVTTTL | 6pins Circular connector |
| | VD output | LVTTTL | |
| | Exposure | LVTTTL | |
| (3) Trigger input | Polarity | POSI/NEGA | Selectable |
| | Min width of trigger pulse | 10 μs | |
| | Camera Link input | LVDS : CC1 input | Camera Link connector |
| | TTL input | LVTTTL: No.2 pin | 6pins Circular connector VIH Min. 2.0V VIL Max. 0.8V |
| (4) Serial Communication | SerTC (Serial to Camera) | Camera Link input (LVDS) | |
| | SerTFG (Serial to Frame Grabber) | Camera Link output (LVDS) | |
| (5) Video output signal | White Clip Level | Digital 8bit | :FFh |
| | Setup Level | Digital 8bit | :00h |
| | Dark Shading | Digital 8bit | :under ±04h for both vertical and horizontal. (condition: gain 0dB) |

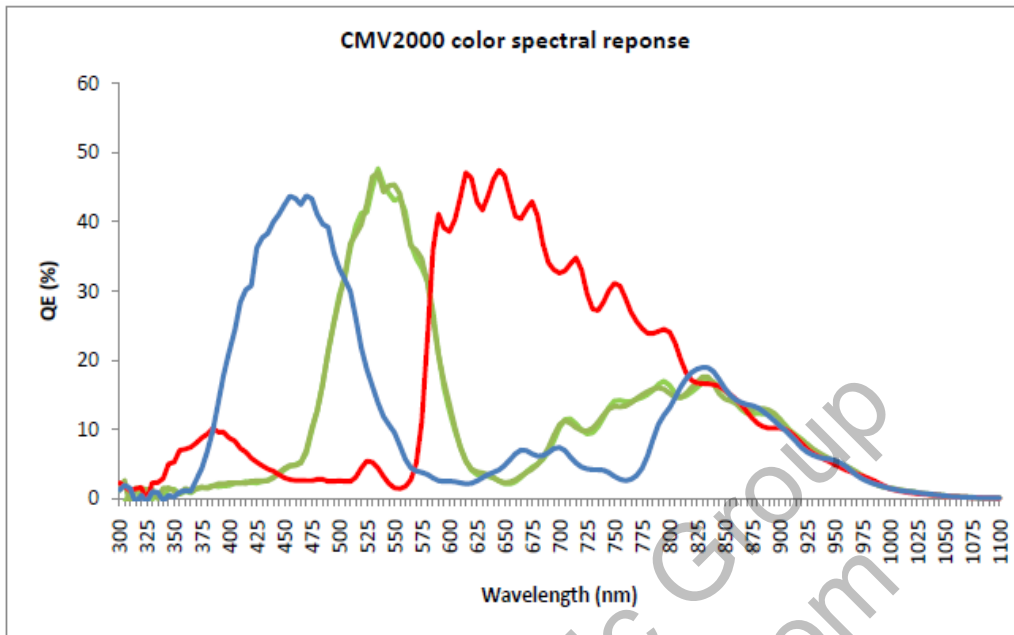

5 seconds shall be waited after turning on power to get proper camera operation.

6pins Circular Connector at rear: GPIO interface

5.3. CMOS Spectral Response (Representative value)

※Lens characteristics and illuminant characteristics are not considered.

5.4. Video Output Format

VGA 500fps Mode: 2Tap Interleaved
 Bayer Pattern: GBRG (At full frame scan)

* At manual partial scan mode, Bayer Pattern changes per 1 line according to the set vertical starting position value.

5.5. Camera Link Port Data Bit Assignment (Base Configuration)

| Port/bit | At 8bit output setting | At 10bit output setting |
|----------|------------------------|-------------------------|
| Port A0 | DA:bit0[LSB] | DA:bit0[LSB] |
| Port A1 | DA:bit1 | DA:bit1 |
| Port A2 | DA:bit2 | DA:bit2 |
| Port A3 | DA:bit3 | DA:bit3 |
| Port A4 | DA:bit4 | DA:bit4 |
| Port A5 | DA:bit5 | DA:bit5 |
| Port A6 | DA:bit6 | DA:bit6 |
| Port A7 | DA:bit7[MSB] | DA:bit7 |
| Port B0 | DB: bit0[LSB] | DA:bit8 |
| Port B1 | DB: bit1 | DA:bit9[MSB] |
| Port B2 | DB:bit2 | Not in use |
| Port B3 | DB:bit3 | Not in use |
| Port B4 | DB:bit4 | DB:bit8 |
| Port B5 | DB:bit5 | DB:bit9[MSB] |
| Port B6 | DB:bit6 | Not in use |
| Port B7 | DB:bit7[MSB] | Not in use |
| Port C0 | Not in use | DB:bit0[LSB] |
| Port C1 | Not in use | DB:bit1 |
| Port C2 | Not in use | DB:bit2 |
| Port C3 | Not in use | DB:bit3 |
| Port C4 | Not in use | DB:bit4 |
| Port C5 | Not in use | DB:bit5 |
| Port C6 | Not in use | DB:bit6 |
| Port C7 | Not in use | DB:bit7 |

6. Function Settings

Camera functions can be set with serial data communications.

| Function | Address | Data |
|---|---------|---|
| Gain | 001 | 0: 0 dB |
| | | 1: +6 dB |
| | | 2: +12 dB |
| | | 3: Manual Gain (Refer to address 008.) |
| | | 4~255: 0dB |
| Shutter (at full frame scan mode) ※For partial scan mode, please refer to Section 9. | 002 | 0: 1/500s |
| | | 1: 1/500s |
| | | 2: 1/750s |
| | | 3: 1/1000s |
| | | 4: 1/1500s |
| | | 5: 1/2000s |
| | | 6: 1/2500s |
| | | 7: 1/4000s |
| | | 8: 1/5000s |
| | | 9: 1/10000s |
| | | 10: 1/15000s |
| | | 11: 1/20000s |
| | | 12: 1/25000s |
| | | 13: 1/30000s |
| | | 14: 1/40000s |
| | | 15: 1/50000s |
| | | 16: Manual Shutter (Refer to address 009&010.) |
| 17~255: 1/500s | | |
| White Balance | 003 | 0: Through |
| | | 1: 3200K |
| | | 2: Spare |
| | | 3: Spare |
| | | 4: Manual White Balance (Refer to the Address 006&007.) |
| | | 5~255: Through |
| Trigger Shutter Mode | 004 | 0: Normal Shutter Mode (Trigger Shutter Mode OFF) |
| | | 1: Fixed Trigger Shutter Mode (Shutter speed can be set with address 002.) |
| | | 2: Pulse Width Trigger Shutter Mode (Shutter speed can be set with trigger pulse width.) |
| | | 3~255: Normal Shutter Mode (Trigger Shutter Mode OFF) |
| Scan Mode | 005 | 0: Full Frame Scan Mode |
| | | 1: Partial Scan Mode (Vertical 1/2) |
| | | 2: Manual Partial Scan Mode (Refer to address 016/017 & 019/020.) |
| | | 3~255: Full Frame Scan Mode |
| Manual White Balance R Gain Control | 006 | 0~120: 0~+12dB 0.1dB/step ※Make the data of Address 003 to 004. |
| | | 121~255: +12dB |
| Manual White Balance B Gain Control | 007 | 0~120: 0~+12dB 0.1dB/step ※Make the data of Address 003 to 004. |
| | | 121~255: +12dB |
| Manual Gain Control | 008 | 0~120: 0~+12dB 0.1dB/step ※Set the data of address 001 to 003. |
| | | 121~255: +12dB |

| Function | Address | Data |
|--|---------|---|
| Manual Shutter Control | 009&010 | 0~480: 1/50000s~1/500s |
| | | 481~2047: 480 |
| | | ※ The setting will be 1 line when 0 is set. |
| | | Exposure Time = The set value × 1line Time [s] 1line Time [s] = ((output pixels/2tap)+5) × 1/79.99MHz At full frame scan, output pixels = 480 1line Time ≐ 4.06 μs |
| | | ※Address 002 data shall be 016. Address 009 MSB and Address 010 LSB make 11bit in total. |
| Trigger Polarity | 011 | 0: Positive Input |
| | | 1: Negative Input |
| | | 2~255: Positive Input |
| Input Trigger Port Selection | 012 | 0: Camera Link Connector 12226-1100-00 PL LVDS |
| | | 1: 6pins Circular Connector TTL |
| | | 2~255: Camera Link Connector: 12226-1100-00 PL |
| Output Data Selection | 013 | 0: 8bit output data (RAW) |
| | | 1: 10bit output data (RAW) |
| | | 2~255: 8bit output data |
| Trigger Input Signals Camera Internal H Sync ON/OFF | 014 | 2: OFF 3: ON |
| Vertical Partial Scan Start Position | 016&017 | 0~Max. Value ※ 1line/step |
| | | ※Max. value shall be limited according to the formula below. 480 (Vertical Partial Scan output max. lines – Vertical Partial Scan output lines) |
| | | ※Address 005 data shall be 002. |
| | | Address 016 MSB and Address 017 LSB make 11bit in total. |
| Vertical Partial Scan Output Lines | 019&020 | 0~480: 1line/step Min.:1line/Max :480 lines |
| | | 481~2047: 480 |
| | | ※ 1 line shall be set when 0 is set. |
| | | Address 019 MSB and Address 020 LSB make 11bit in total. ※Address 005 data shall be 002. |
| Remote Communication Baud Rate Setting | 030 | 0: 9600bps |
| | | 1: 19200bps |
| | | 2: 38400bps |
| | | 3: 57600bps |
| | | 4: 115200bps |
| | | 5~255: 9600bps |
| Data Save | 032 | Input 083 to save address 000 ~ 031 to EEP-ROM. |

7. External Connector Pin Assignment

7.1. 6pins Circular Connector HR10-7R-6PA (HIROSE) equivalent

| Pin No. | |
|---------|-----------------------|
| 1 | Power IN DC+12V |
| 2 | Trigger IN(TTL level) |
| 3 | HD |
| 4 | VD |
| 5 | Exposure |
| 6 | GND |

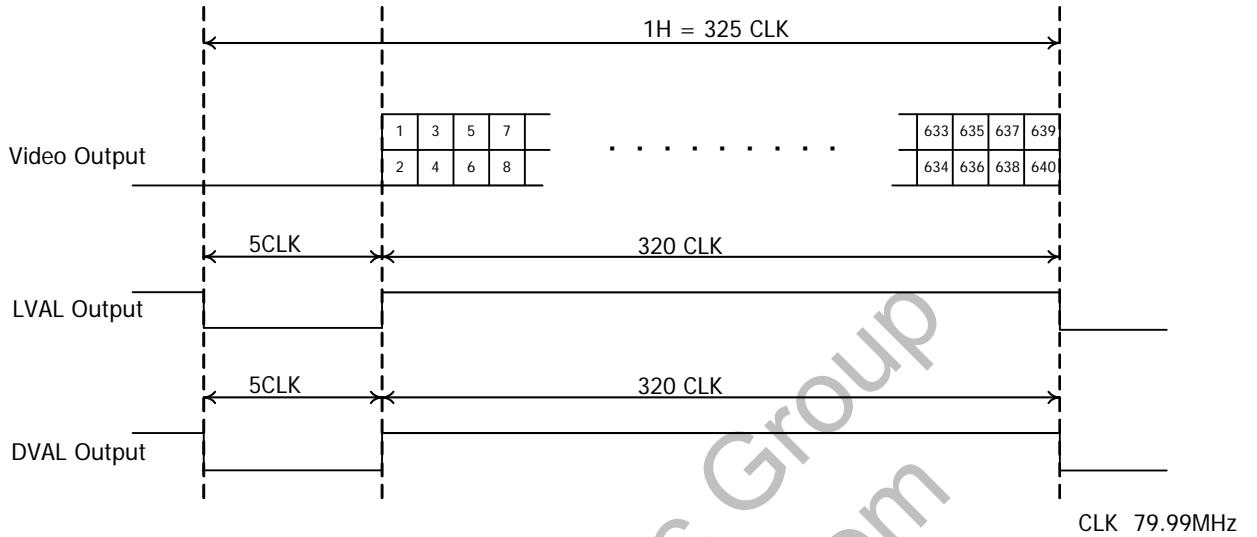

7.2. 26pins Mini Camera Link Connector 12226-1100-00 PL (SUMITOMO 3M)

| Pin No. | | Pin No. | |
|---------|--------------------|---------|--------------------|
| 1 | GND | 14 | GND |
| 2 | X0- | 15 | X0+ |
| 3 | X1- | 16 | X1+ |
| 4 | X2- | 17 | X2+ |
| 5 | Xclk- | 18 | Xclk+ |
| 6 | X3- | 19 | X3+ |
| 7 | SerTC+ | 20 | SerTC- |
| 8 | SerTFG- | 21 | SerTFG+ |

| 11 | CC3- | 24 | CC3+ |
| 12 | CC4+ | 25 | CC4- |
| 13 | GND | 26 | GND |

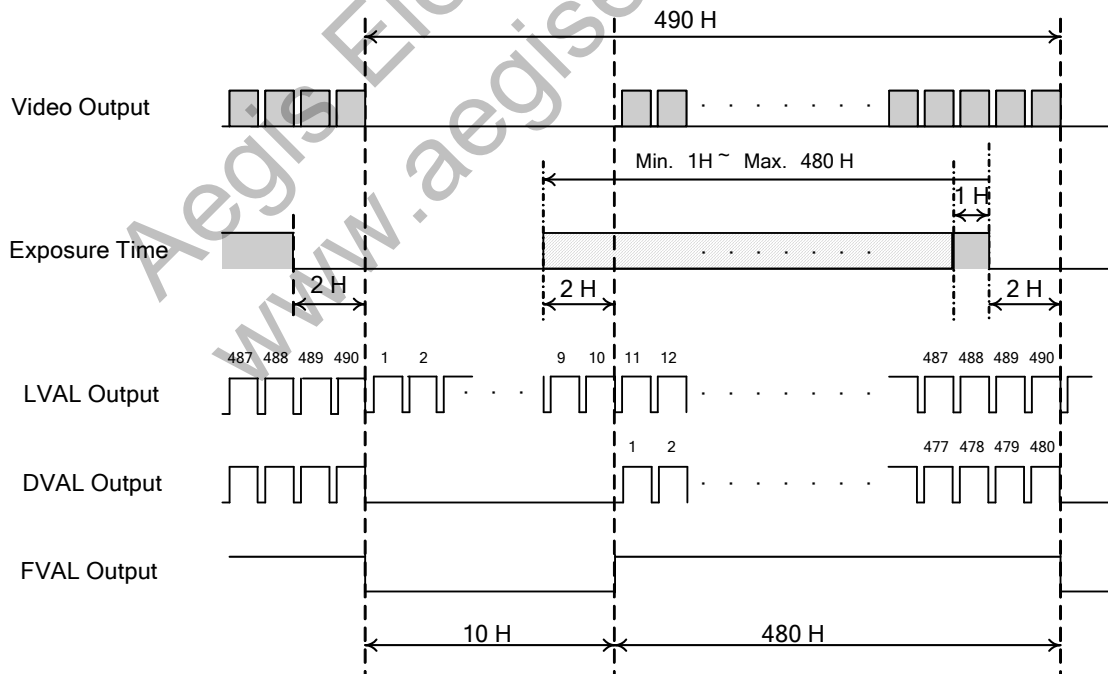

8. Timing Chart

8.1. Horizontal Synchronous Signal Timing

8.2. Vertical Synchronous Signal Timing

8.2.1 Full Frame Scan Mode

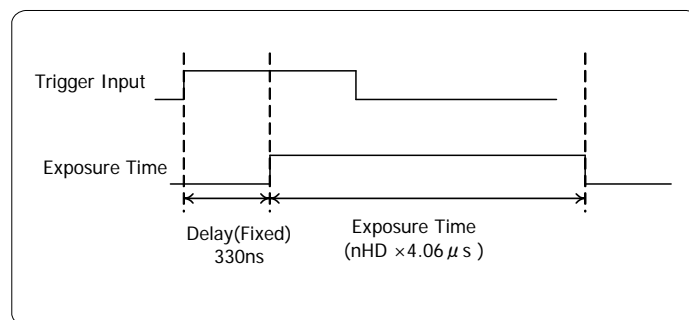

※Video output signal delays by 2H from Exposure Time.

8.2.2 Fixed Trigger Shutter Mode

- This is the mode to start exposure with external input trigger signals, and set the exposure time with serial commands.
- Trigger operation is CLK Sync. HV-Sync Reset. The delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure is approx. 330ns.
- Triggers can be accepted even when outputting video signals. However, trigger signals for exposure to start the next video output prior to the completion of video transmission for the prior video output signals cannot be accepted.

If the edge part of trigger signals is overlapped with video outputting period, 1 line noise may be detected on the video output screen. To input trigger signals during video output period, set the data 003 to the address 014 (Trigger input signal, camera internal H sync ON). External trigger signals are synchronized with camera internal H signals so that max. 1HD jitter to Exposure Time delay would occur.

- When changing the camera to fixed trigger shutter mode, the first output image can be unstable. Please input the first trigger as a dummy to ignore and take the second and after as the actual triggers.

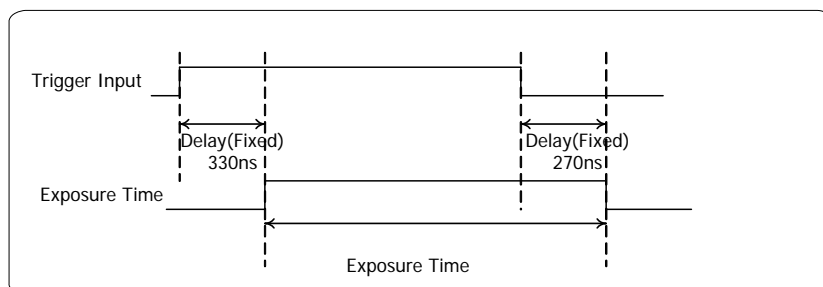

※Video output signal delays by 2H from Exposure Time.

8.2.3 Pulse Width Trigger Shutter Mode

- This is the mode to start exposure with external input trigger signals, and set the exposure time with pulse width of the trigger signals.
- Trigger operation is CLK Sync. HV-Sync Reset. The delay time (Exposure Time Delay) from detecting trigger edge in the camera to starting exposure is approx. 330ns. And, the delay time from detecting trigger end edge to completing exposure is approx. 270ns.
- Pulse width is min. 1HD to approx. 2 frames. Functionally, there is no upper limitation, but noises such as dark noises and shadings may be noticeable at long time exposure.
- Triggers can be accepted even when outputting video signals. However, trigger signals for exposure to start the next video output prior to the completion of video transmission for the prior video output signals cannot be accepted.

If the edge part of trigger signals is overlapped with video outputting period, 1 line noise may be detected on the video output screen. To input trigger signals during video output period, set the data 003 to the address 014 (Trigger input signal, camera internal H sync ON). External trigger signals are synchronized with camera internal H signals so that max. 1HD jitter to Exposure Time delay would occur.

- When changing the camera to pulse width trigger shutter mode, the first output image can be unstable. Please input the first trigger as a dummy to ignore and take the second and after as the actual triggers.

※Video output signal delays by 2H from Exposure Time.

9. Partial Scan Mode
 •Vertical Partial Scan

s: Vertical partial scan starting position (address 016 & 017)
 n: Vertical partial scan output lines (address 019 & 020)

| Scan Mode (address:005) | s | n | Vertical Sync. Frequency (Hz) |
|------------------------------------|-----|-----|---|
| 0:Full frame scan mode | 0 | 480 | 502.29 |
| 1:Partial scan mode (Vertical 1/2) | 120 | 240 | 984.49 |
| 2:Manual partial scan mode | Any | any | $79.99\text{MHz} / ((\text{Vertical partial scan output lines} + 10) \times (325))$ |

•The max value of vertical partial scan starting position is limited with the formula below since vertical partial scan output line has priority.

The max value of vertical partial scan starting position

$$= 480(\text{The max value of vertical partial scan output line}) - \text{Vertical partial scan output lines}$$

(Ex.) When 400 is set as vertical partial scan output lines, the max value of vertical partial scan starting position will be $480 - 400 = 80$.

If vertical partial scan starting position is set to 90 with this time, vertical partial scan output line has priority so that vertical partial scan starting position shall be limited to 80.

※ At manual partial scan mode, manual shutter value to be set shall meet the following conditions.

The set manual shutter lines \leq Vertical partial scan output lines

If the condition above is not met, shutter lines to be set will be the same number as vertical partial scan output lines.

10. Remote Interface Function

Camera can be controlled by external computers and others via camera link interface.

(1) The settings for RS-232C are as follows.

Baud Rate : 9600bps, 19200bps, 38400bps, 57600bps, 115200bps
 Data : 8bit
 Stop bit : 1bit
 Parity : None
 XON/XOFF : not controlled

(2) Control code

- The total control code is 14 bits, which conforms to ASCII code.
- The control code consists of camera No. process code, remote controller address, remote controller data, and CR. Execute Read/Write through PC, and the camera will reply the data.

| 1 | 2 | 3 | 4 | 5 | 6 | 7byte目 | 8 | 9 | 10 | 11 | 12 | 13 | 14 |
|----------------------|---|---|---|---|---|-----------------|---|---|----|------------------------|----|----|-----|
| Camera No. | | | | | | Process code | Remote controller address | | | Remote controller data | | | CR |
| 000000: Common No. | | | | | | "R" Read mode | Please refer to the address table of 6. Function setting. | | | 000~255 | | | 0Dh |
| | | | | | | "W" Write mode | | | | | | | |
| Dedicated Camera No. | | | | | | "C" Camera mode | | | | | | | |

Camera No

Please send the common code, "000000", consist of 6 bytes of characters/numeric strings.

The returned data from the camera shall be the dedicated camera No assigned for that specific camera.

Process code

Input any one of R, W, or C to the process code.

R (read mode) is to read the data of remote controller address.

Please be noted to set any dummy data (000~255) to 11th ~13th, since a command shall consists of 14 bytes.

W (write mode) is to write the data to the remote controller address.

Please be noted that the data cannot be saved into EEPROM of the camera.

(Reboot the camera, and the data is reset to the initial setting.)

To save the data into EEPROM, please refer to Clause 5. Function Setting.

Note: Once the data was saved into EEPROM, it may not be reset to the initial settings.

C is the code to send the data back from the camera.

Note: Do not set code C when sending the data from PC side.

Remote controller address

Note: Do not save the data into the address other than specified, since it may cause the damages or malfunction of the camera.

Remote controller data

Set the decimal number (000~255) for the remote controller data. Please be noted to set any dummy data at read mode.

CR

Be sure to input "CR" to confirm the end of the command.

11. Initial Settings

| Function | Address | Data |
|---|---------|---|
| Gain | 001 | 0: 0dB |
| Shutter | 002 | 0: 1/500s |
| White Balance | 003 | 0: Through |
| Trigger Mode | 004 | 0: Normal Shutter Mode (Trigger Shutter Mode OFF) |
| Scan Mode | 005 | 0: Full Frame Scan Mode |
| Manual White Balance R Gain Control | 006 | 0: 0dB |
| Manual White Balance B Gain Control | 007 | 0: 0dB |
| Manual Gain Control | 008 | 0: 0dB |
| Manual Shutter Control | 009&010 | 480: 1/500s |

12. CMOS Optical Axis Accuracy

(*) Dimensions from datum plane to the center of the lens mount

910-006-01-01
(Unit:mm)

13. Dimensions

*2)C mount screws comply with ANSI/ASME B1.1, 1-32UN(2B).

*1)Screw length from the lens mount surface shall be under 6mm.

And protruding portion shall be less than 10mm.

999-547-00-00
(Unit:mm)

14. Cases for Indemnity (Limited Warranty)

We shall be exempted from taking responsibility and held harmless for damage or losses incurred by the user in the following cases.

- ✧ In case damage or losses are caused by fire, earthquake, or other acts of God, acts by third party, deliberate or accidental misuse by the user, or use under extreme operating conditions.
- ✧ In case indirect, additional, consequential damages (loss of business interests, suspension of business activities) are incurred as result of malfunction or non-function of the equipment, we shall be exempted from responsibility for such damages.
- ✧ In case damage or losses are caused by failure to observe the information contained in the instructions in this product specification & operation manual.
- ✧ In case damage or losses are caused by use contrary to the instructions in this product specification & operation manual.
- ✧ In case damage or losses are caused by malfunction or other problems resulting from use of equipment or software that is not specified.
- ✧ In case damage or losses are caused by repair or modification conducted by the customer or any unauthorized third party (such as an unauthorized service representative).
- ✧ Expenses we bear on this product shall be limited to the individual price of the product.

15. Sensor Pixel Defect

Sensor pixel defects might be noted with time of usage of the products.

Cause of the Sensor pixel defects is the characteristic phenomenon of CMOS itself and CIS is exempted from taking any responsibilities for them.

16. Product Support

When defects or malfunction of our products occur, and if you would like us to investigate on the cause and repair, please contact your distributors you purchased from to consult and coordinate.

Camera control sample software (RS232C) is downloadable from our web but we shall be exempted from taking responsibility and held harmless for damage or malfunction of your hardware and software caused by using this control software. The purpose of the control software prepared is for you to check operation and evaluate our products. Please be noted that CIS does not customize the program nor provide source code.
